**What if you could offer your guests a 5 Star shower?**

**We can show you how you can do it for Free!**

Sounds too good to be true, but it isn't. Our Ultimate Shower will give your guests the best shower they have ever had, and... pay for themselves in about 6 months!

Your profits are literally  
going down the drain!  
We can help!

## Frequently Asked Questions:

Think Green! Tell your guests  
that the fantastic shower they  
just enjoyed conserved 25% of  
the water of a standard shower!

### **How can the Ultimate Shower pay for itself?**

The Ultimate Shower has the state of the art water dispersment technology to deliver plenty of water to your guest while only using 1.7 gallons of water which is 3/4 the water usage of the showers you are using right now. That water savings translates into thousands of dollars in water and the heating of the water every month.

### **How long will it take for the showers to pay for themselves?**

The average hotel will save enough on water and the heating of the water to pay for our shower systems in about six months. *After the six months... The savings become profit on your bottom line!*

### **How does the Ultimate Shower give a better shower than a standard shower while conserving water?**

Computer model state of the art technology design allows more water to cascade over your guest than a standard shower head. A standard shower head gives a round pattern. Much of the water never touches the user. The water is wasted. The Ultimate shower gives a wide band of water that will cover the user from shoulder to shoulder. The holes in the shower head are designed specifically to give the proper pressure and "feel" of a conventional shower that consumes much more water.

### **Our hotel guests often complain about a lack of water pressure. Will your water conserving Ultimate Shower help?**

Without knowing the exact cause we can only speculate. Given that, we would expect that the lack of water pressure occurs during peak usage times. If your guests use half the amount of water, the problem may likely be solved by using our Ultimate Shower System!

### **If our guests want to know where they can get the Ultimate Shower, what do we tell them?**

You have two choices. You can refer them to us and we will give you a \$50 referral fee for each shower we sell or you can offer your customers the showers at \$100 (suggested retail is \$195) collect the money and we will ship the shower to your customer and bill you only \$50 plus a shipping and handling fee of \$10. You make \$40 to \$50 per sale, your customer gets a huge discount and they are thrilled!

# The Ultimate Shower by, VOSTRA USA

Where energy savings and user satisfaction  
reside harmoniously

## The Problem...

Virtually all hotels with tub/shower combinations have the same maintenance problem. Water sprays out between the shower wall and the curtain and gets the floor wet. Mold and tile/wall damage follow.

There is a solution! In fact, the solution will save you money and will be a significant source of revenue for your hotel.

*Water leaks out here and causes problems!*

**The Problem...** The typical shower head forces the user to stand close to the wall. Over-spray gets out between the wall and the shower curtain and onto the floor.

## The Solution...

The Ultimate Shower by Vostra USA has an extension which places the user more toward the center of the tub. This simple feature virtually eliminates the problem!

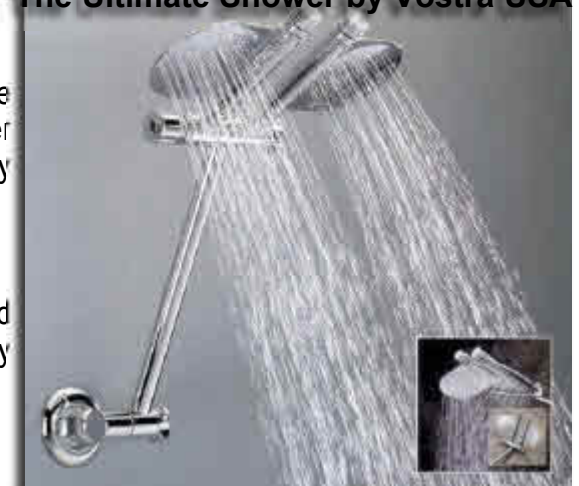

## The Ultimate Shower by Vostra USA

## The Problem...

Many older hotels have the shower head placed at 5"10" off the floor. Anyone taller than 5"10" has to squat down to get under the shower. This has been a significant complaint in many hotels.

## The Solution...

The Ultimate Shower by Vostra USA can be adjusted upward (as shown in the photo) to raise the water well above most any user.

## The Problem...

Most hotels leave a bottle of water in the room for the guests. The water is generally priced several times the going rate for bottled water. Just ask your guests... they are put off by this method of increasing hotel revenue.

## The Solution...

Offer the Ultimate Shower by Vostra USA to your guests at more than 50% off suggested retail price. You will make \$50 per shower sold! Sure beats a few bucks on a bottle of water. Not only that, but you have thrilled a guest instead of irritating them. Keep some at your hotel, or we will drop ship to your customer. Either way, you will have happy customers. (See a case study online - high volume pricing available)

## The Problem...

Increased overhead costs while room rates must stay competitive.

## The solution...

The Ultimate Shower by Vostra USA uses approximately 1.7 gallons of water a minute (32% less than what you are likely using), saving thousands of dollars in water and the heating of the water per year.

This chart has been provided by the Washington Suburban Sanitary Commission

ACTIVITY / PER PERSON ONE TIME EACH DAY	GALLONS USED (no water saving devices)	COMMENTS
		THE AVER. SHOWER = 12 TO 15 MIN.
BATH	30 - 50 GAL.	A 15 MIN SHOWER = APPROX. 150 GAL.  MANY PEOPLE TAKE LONGER THAN 15 MINUTE SHOWERS.
SHOWER (WATER RUNNING)	7 - 10 GAL. PER MINUTE	OFTEN, DURING THE HOT WEATHER WE SHOWER MORE THAN ONE TIME PER DAY.

If you are not using water saving shower heads, you are likely consuming 150 gallons of water per guest, per day. Our shower would only consume 28.5 gallons. The so-called "Water Saving" showers on the market would consume at least 37.5 gallons per shower. Independent random testing has shown that many so-called "Water Saving" showers consume more than the standard 2.5 gallons of water when tested by an independent laboratory. The "Ultimate Shower" has been certified by a highly respected independent laboratory indicating only 1.7 gallons per minute. Our "Ultimate Shower" conserves far more water than the "Green Seal" minimum.
