

The Ultimate Shower by,  
**VOSTRA USA**  
Where energy savings and user satisfaction  
reside harmoniously

Your profits are literally  
going down the drain!  
We can help!

**We have the ultimate solution to three of your main concerns!**

**1. How can we distinguish ourselves enough to attract more tenants without significant cost?**  
Install our Ultimate Shower in every apartment bathroom. Our shower will increase the “wow factor” of your bathroom. Your potential tenants will see luxury beyond what they have ever seen in an apartment shower. *Let's face it, most apartment bathrooms look similar.* When presenting your product to a potential tenant, you now have something significant to talk about!

**2. How can we lower overhead without offering less in product and service?**  
The Ultimate Shower system pays for itself in a few short months! How?? If you are using water saving shower heads, you are using 2.5 gallons of water (or more) a minute while the shower is on. If you are paying for the water and the heating of the water, you are going to love this! Our Ultimate Shower uses only 1.9 gallons of water a minute. Yes, you will save 32% of the cost of the water and heating of the water for showers. We are conserving half the water of the so-called water saver showers!

**3. How can we reduce our maintenance costs?**  
Every tub/shower combination has the same costly maintenance issue. Water gets between the wall and the shower curtain and damages the floor and wall adjacent to the tub. We have a solution! Our Ultimate Shower has an extension arm which moves the user toward the middle of the tub. Problem solved!

**How does the Ultimate shower offer a better shower than a standard shower while conserving half of the water?**

Computer model state of the art technology design allows more water to cascade over your guest than a standard shower head. A standard shower head gives a round pattern. Much of the water never touches the user. The water is wasted! The Ultimate Shower gives a wide band of water that will cover the user from shoulder to shoulder. The holes in the shower head are computer designed to give the proper pressure and “feel” of a conventional shower that consumes more than twice the water.

**Act now...** Every minute you wait you are pouring water and money down the drain. Call us to set up a demonstration. Once you see the shower in action, you will be even more impressed!

**Call us at 407-496-3596**

**Think Green! Tell your tenants  
that the fantastic shower they  
will enjoy will conserve 50% of  
the water of a standard shower!**

# The Ultimate Shower by, **VOSTRA USA**

*Where energy savings and user satisfaction  
reside harmoniously*

## **The Problem...**

Virtually all apartments with tub/shower combinations have the same maintenance problem. Water sprays out between the shower wall and the curtain and gets the floor wet. Mold and tile/wall damage follow.

There is a solution! In fact, the solution will save you money

**Water leaks out here and causes problems!**

**Why does this happen?** The typical shower head forces the user to stand close to the wall. Over-spray gets out between the wall and the shower curtain.

## **The Solution...**

The Ultimate Shower by Vostra USA has an extension which places the user more toward the center of the tub. This simple feature virtually eliminates the problem!

## **The Problem...**

Many older apartments have the shower head placed at 5"10" off the floor. Anyone taller than 5"10" has to squat down to get under the shower. This has been a significant complaint in many apartments.

## **The Solution...**

The Ultimate Shower by Vostra USA can be adjusted upward (as shown in the photo) to raise the water well above most any user.

## **The Problem...**

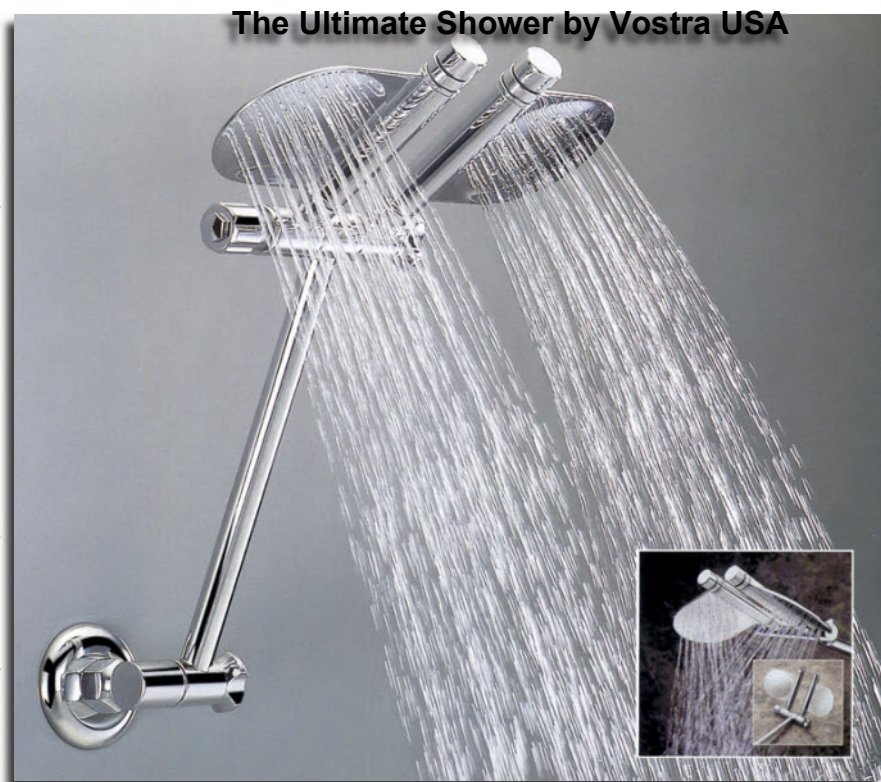

Increased overhead costs while apartment rates must stay competitive.

## **The solution...**

The Ultimate Shower by Vostra USA uses only 1.7 gallons of water a minute, saving thousands of dollars in water and the heating of the water per year.

## **The bottom line...**

**Our Ultimate Shower system will not cost you a dime, it will save you thousands of dollars while increasing the value of your apartment.**
