

VOSTRA USA

Vostra Water Bead Technology - The Ultimate Shower

While most showers have been designed to comply with the 2.5 gallon (water saver) per minute Federal regulations merely by using a water restrictor, the Vostra Ultimate Shower was designed from one end to the other to give the feel of a 4 gallon per minute shower, while only using 1.7 gallons per minute.

The Ultimate Shower uses our exclusive “Water Gap” technology to solve the problem most people have with low water consumption showers. Most people find that “water saver” showers do not give much body coverage, and women complain about taking “forever” to wash their hair.

Problem Solved!

Our internal shower technology along with the design of the rubber nipples create a technological marvel. We have created gaps between the water droplets (Beads). These gaps allow for low water consumption while offering wide coverage and a robust shower.

Our Water Bead Technology can only be seen when photographed using high speed film. We had our shower photographed by a professional using ultra high speed film in order to show you how amazing our Water Bead Technology is.
